

**FGH-V GALERIA
BALCONY WINDOW**

➤ A NEW DIMENSION TO THE LOFT

CONTACT WITH THE ENVIRONMENT

The **FGH-V Galeria** is an innovatory large roof window whose sashes, when open, form a balcony in the loft. The upper top hung sash opens upwards with the lower sash sliding forwards and enabling free access to the balcony recess. Just a few steps is all it takes to find yourself "outside" and feel the sun rays, gusts of wind or admire beautiful views.

DURABILITY AND AESTHETICS

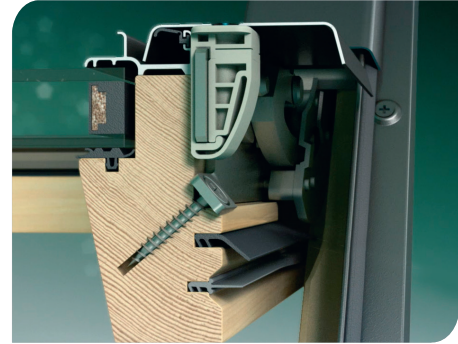

The upper sash is lifted steplessly up to an angle of 45. The side guardrails are integrated into the bottom sash and slide out during its opening. When closing the lower sash, the balcony guardrails hide in the window and do not protrude from the roof surface. They are hidden under the window cladding elements, thus they do not collect dirt or interfere with the aesthetics of the roof. After opening, the balcony railings are always dry and clean, which ensures trouble-free operation.

SAFETY

Both the upper and lower sashes are equipped with safety glazing units P2 with internal panes laminated and external toughened glass featuring easy maintenance coating. Inside the laminated glass, there can be found two layers of PVB film. Under such windows even children can play safely as potential breaking the internal glass does not pose any danger (pieces of glass remain attached to the film).

The balcony window as standard is equipped with an innovative structure re-enforcement system topSafe, thus offering increased burglary-resistance.

COMFORT OF USE

HANDLE ALWAYS WITHIN REACH

The window is operated by means of a handle situated in the lower section of the sash, making it always within easy reach, so the window can be freely opened and closed at all times.

The window has a multi-point locking system without the traditional locking keep. After turning the handle, the sash is locked at both sides of the frame. The lower sash slides forwards. In order to close it, just release the locks located by the rails on the frame.

release the lock

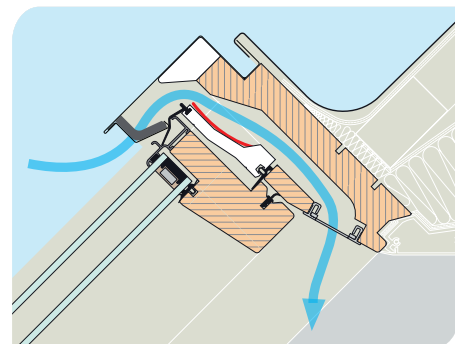

« EASY CLEANING EXTERNAL GLASS

The sash when rotated through 180 can be locked for washing with a special bolt. It allows safe and convenient washing the external glass surface.

AUTOMATIC AIR INLET »

The Galeria balcony window is equipped with an automatic V40P air inlet, ensuring the optimum amount of fresh air in the room and energy savings.

FAKRO SYSTEM

AVAILABLE SIZES

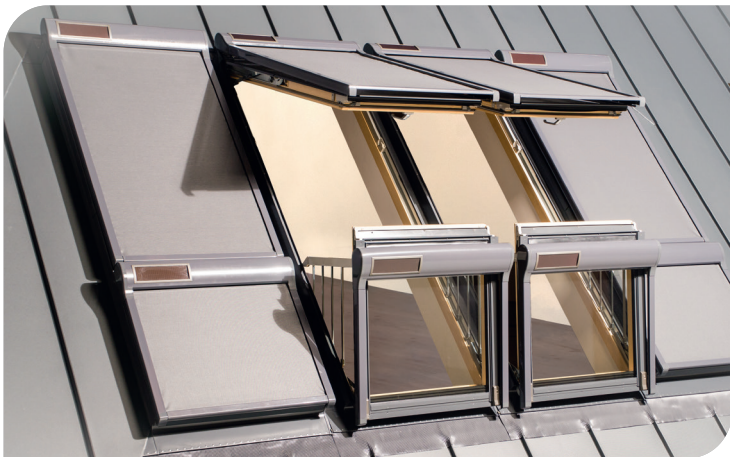

Large sizes of the balcony window provide ample natural light in the room.

The windows are offered in the size 94x255 cm (37"x100") as standard. To order, they are also available in size 78x255 cm (30"x100"). This window is installed in the roofs with pitches 35°-55° without a knee wall.

A WIDE RANGE OF STANDARD ACCESSORIES

Upper and lower sashes can be equipped with internal or external accessories.

FLASHINGS

There are few types of flashings dedicated for the balcony window. They are additionally marked with the letter "G".

Available Flashings:

- ESV/G for shingles
- EBV-A/G for standing seam
- EHN-A/G for high profile roofing
- EHN-AT/G Thermo universal flashing with additional insulation.
